JOHAN TOURS DOO is the company which provides services in terms of transportation of goods and people. We have been using Polytron products for more than five years for the following vehicles:

MERCEDES BENZ: SPRINTER 312D i VITO 108  
IVECO: DAILY 50C 15V i DAILY 50 C13V  
FIAT: DUCATO 230  
ZASTAVA: NEW TURBO RIVAL 40.10

Since we started using Polytron products, apart from regular maintenance, we didn't have any vehicle break-downs which would interfere with our everyday activities and using them also provided the maximum performance of our vehicles.

The fuel consumption expenses were reduced for 8% (we reduced the fuel consumption for 12% but the prices of the fuel went up so the overall result of the reduction of expenses was 8%). As we started using Polytron fuel additives we stopped having problems with fuel injection systems. They were particularly efficient with MERCEDES BENZ vehicles as their noozles needed to be constantly serviced before due to presence of water and debris in fuel.

Vehicle maintenance costs in terms of parts consumption and maintenance labour (the regular one) are reduced to the minimum and with savings over 65% in terms of spare parts. Even though we provide our transport services on a daily basis (Serbia- Austria- Switzerland relation) we haven't had any problems with our vehicles so far. We used to have problems before we started using Polytron products. High temperatures during summer together with overloaded vehicle both used to cause the engine to overheat, occasional falling off of the drive shaft, ruining wheel bearings...etc.
