FEED BACK

We saw the demonstration and were very much skeptical before as their are thousands of products in the market claiming better mileage and lesser maintenance but non showing a logical reasoning.

The MTC Polytron Demo simply left us amazed on what a few drops could change in a metal block.

We asked them all possibilities and received satisfactory replies....but to convince ourselves we tested the same in our Private cars we are car lovers and could feel the difference in noise and power the most.

I felt my 4 year old car run over a lakh kilometers like I was driving a brand new one and even better at higher speeds above 100 km/hr. Smoothness in gear shifting, although a automatic I could feel that the gear are shift time was not faster but smoother.

I testified my feeling with two of my friends by letting them drive my car and both felt the difference.

We further tested MTC into our commercial 10 wheel Tank truck, wherein the feedback from the driver was less noise and amazingly the temperature of the engine did not rise as usual even after a trip in full load.

We say here that - The results may vary from engine to engine but the Metal treatment is certainly effective.

Regards
